

Andrew Money Penny -- Individual Report

The most important contribution I made to the Group Project was the development and implementation of the Hospital location. The Hospital worked very similarly to the other 5 locations in that the player could collect items, use items for certain events, move around and, of course, give the player the opportunity to stay and prepare for the oncoming night. However, although I didn't add any major features to the Hospital, I did try to add some lore in order to try and add more depth to the events surrounding the game through a newspaper article and some entries in a set of documents. The documents also did utilise a small system that would allow the player to move between entries on the same Text Node as well in order to make it much more efficient.

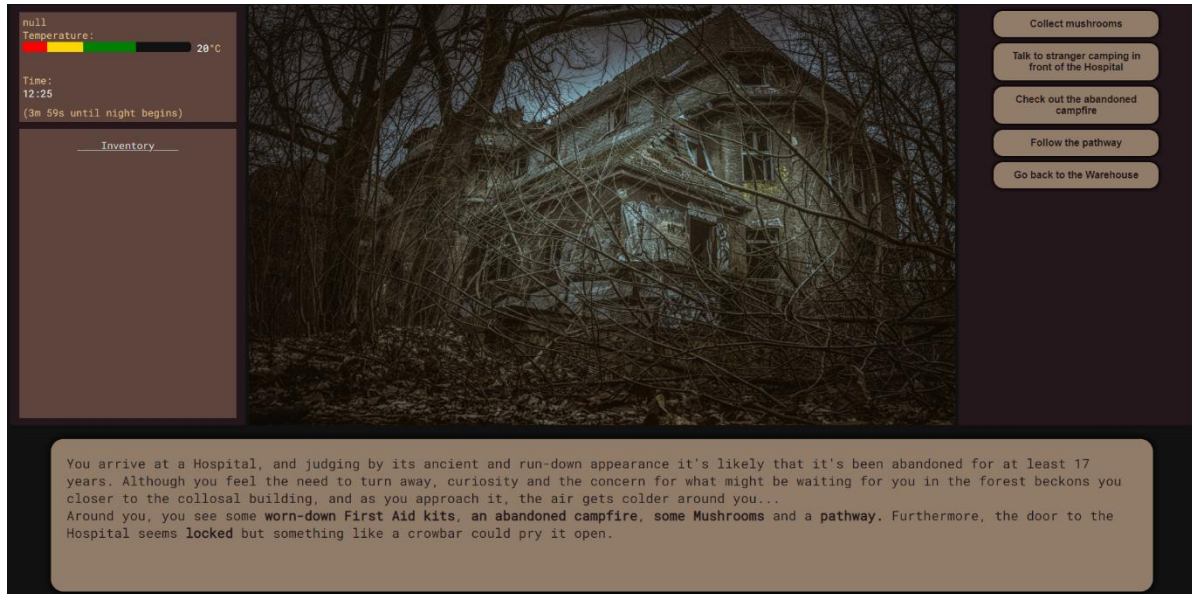

Figure 1: The Hospital Location upon visiting it for the first time

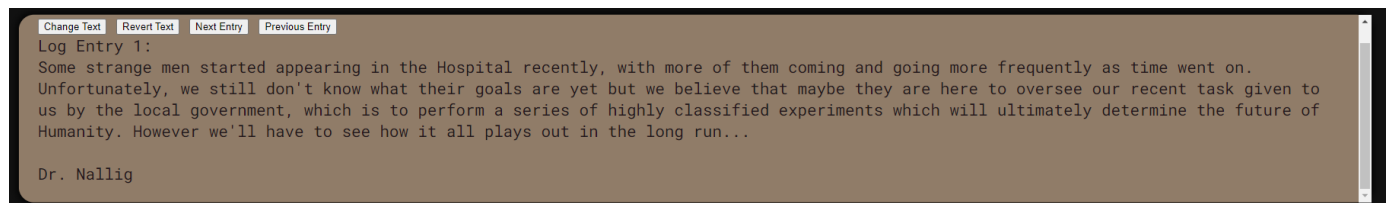

Figure 2: The Document's Text Entries

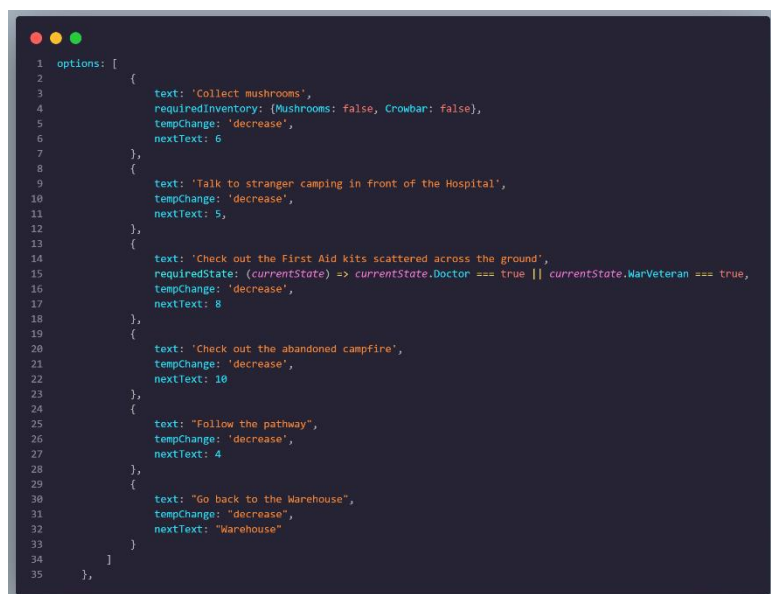

Figure 3: Code for the options on the Hospital's first Text Node

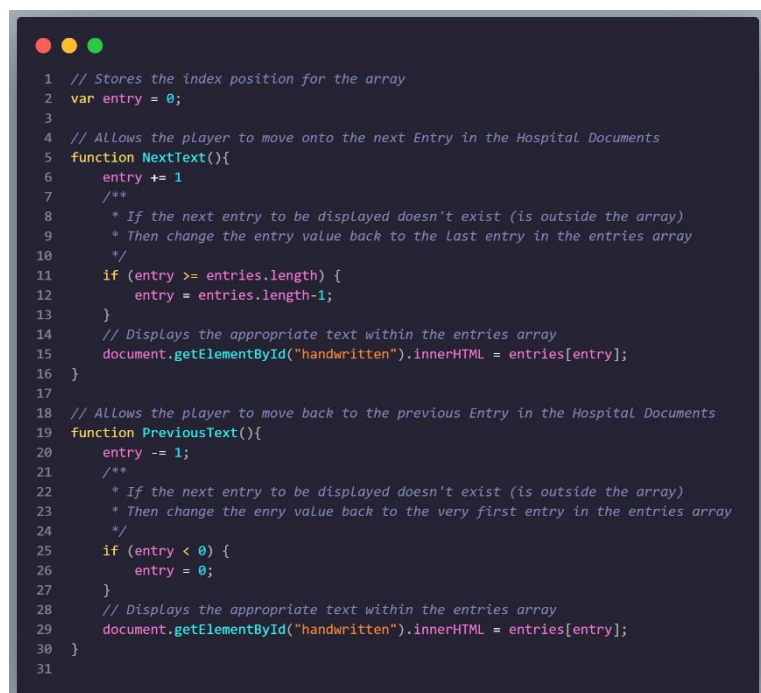

Figure 4: The code for the Text Entry System (which uses an Array)

Also, a few weeks into the project I tried to develop a prototype for a typewriter system using a version that I found online. The reason for implementing this was to add more depth to the game and allow the text to appear slowly over time rather than having blocks of text appear each time, because that could feel dull. However, the online version didn't suit our needs and was only very simple. Therefore, in order to have it better suit our needs, I altered it and added some extra functionality to it so that it would also work with HTML tags so that their effects would work properly, which was something that the basic version couldn't do. Unfortunately, this would've required a lot of extra methods, and so the typewriter system was later improved upon and better implemented by James.

```
1 // Will display the textNode text by printing it in a typewriter like fashion
2 +async function typeSentence(sentence, delay = 30) {
3 +
4 + // Clears the HTML so that it doesn't keep adding on to it
5 + document.getElementById('DialogueHospital').innerHTML = '';
6 +
7 + // splits the sentence into individual characters
8 + var letters = sentence.split("");
9 +
10 + let i = 0;
11 + while(i < letters.length) {
12 +
13 + // the delay before each letter is printed
14 + await waitForms(delay);
15 +
16 + // If the letter isn't an opening HTML tag character, this code runs
17 + if (letters[i] != "<") {
18 + document.getElementById('DialogueHospital').innerHTML += letters[i];
19 + i++;
20 + }
21 + else {
22 + var tag = letters[i];
23 + i++;
24 + while(letters[i] != ">"){
25 + tag += letters[i];
26 + i++;
27 + }
28 + tag += letters[i];
29 + i++;
30 + switch(tag){
31 + case "<strong>": i=tagStrong(letters, i); break;
32 + default: document.getElementById('DialogueHospital').innerHTML += tag;
33 + }
34 + }
35 + }
36 + return;
37 +}
```

```
42 +function tagStrong(letters, i){
43 + var word = "";
44 + while(letters[i] != "<"){
45 + word += letters[i];
46 + i++;
47 + }
48 + i += 9;
49 + document.getElementById('DialogueHospital').innerHTML += "<strong>" + word;
50 + return i;
51 +}
52 +
53 +
54 +
55 +
56 +// Creates a time delay before each letter is printed
57 +function waitForms(ms) {
58 + return new Promise(resolve => setTimeout(resolve, ms))
59 +}
```

Figures 5 & 6: Original code used for the prototype of the Typewriter System

Furthermore, I tried developing a simple Timer prototype system that would increment by 1 from 0 every second as soon as the game started. The main purpose of this timer was to allow the total time for a run of the game to be displayed after the player had either won or lost. However, in order to add more time-based events and functionality to the game, the Timer system was later built upon and implemented by James.

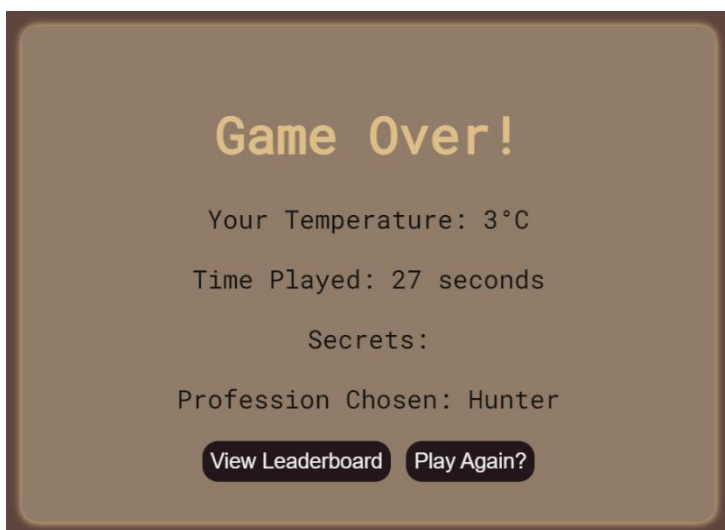

Figure 7: Original plan for the use of the Timer System

```
1 +var time = 0;
2 +var myTimer;
3 +
4 +function StartTimer() {
5 + myTimer = setInterval(Timer, 1000);
6 +}
7 +
8 +function Timer() {
9 + time++;
10 + sessionStorage.setItem('Time', time);
11 +}
12 +
13 +function StopTimer() {
14 + var times = sessionStorage.getItem('Time');
15 + clearTimeout(myTimer);
16 + document.getElementById('TheTime').innerHTML = times;
17 +}
```

Figure 8: Original code used for the prototype of the Timer

Additionally, we all agreed that the game needed to have some replay value, and so in order to make the player choose their decisions more carefully, I decided to try and develop a prototype for a temperature system. This would mean that the player would start with a base temperature but every time the player selected a button/option, their temperature would decrease by a set amount (or increase by a set amount if they were by a fire for instance) and it took a while to get this to work with the Text Node system but eventually I did manage to get it working, but it was inefficient, so the Temperature system was also improved upon and better implemented later on by James.

```

5 +function decreaseTemp(value) {
6 +   var change = value;
7 +   if (change == "decrease") {
8 +     temperature -= tempDecrease;
9 +     if (temperature <= -21) {
10 +       sessionStorage.setItem("Temperature", temperature);
11 +       window.location.href = "EndStatistics.html";
12 +     }
13 +   }
14 +   else if (change == "increase") {
15 +     temperature += tempIncrease;
16 +     if (temperature >= 80) {
17 +       sessionStorage.setItem("Temperature", temperature);
18 +       window.location.href = "EndStatistics.html";
19 +     }
20 +   }

```

Figure 9: Original code used for the prototype of the Temperature System

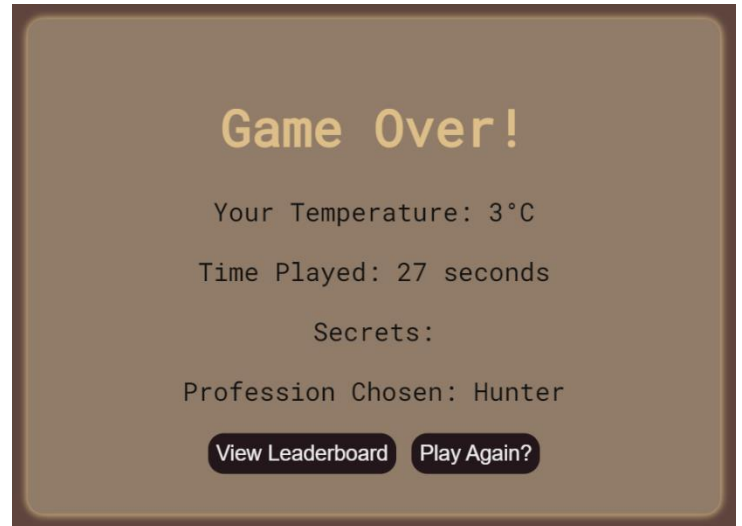

Figure 10: Original plan for the use of the Temperature System

However, I was able to develop and implement a fully functioning Cheat Code system that can alter things like the colour scheme of the game's main layout or affect in game systems, such as being able to disable the Typewriter system. The system wasn't too hard to develop as the text entered into the Cheat Code box is validated and if it matches the list of cheat codes then a change is made, otherwise nothing happens. Furthermore, the cheat codes entered do need to be case-specific as well.

```

1 // validates the entered Cheat Code
2 function validateCheat() {
3
4   // Stores the Cheat Code entered
5   var cheat = document.getElementById("Cheat").value;
6
7   sessionStorage.setItem("ID", "Styling");
8   sessionStorage.setItem("Attribute", "href");
9
10  // switches the effects based on the Cheat Code's value
11  switch(cheat){
12    case "BlueScheme":
13      sessionStorage.setItem("Value", "./assets/css/Cheat1.css");
14      break;
15    case "GreenScheme":
16      sessionStorage.setItem("Value", "./assets/css/Cheat2.css");
17      break;
18    case "Monochrome":
19      sessionStorage.setItem("Value", "./assets/css/Cheat3.css");
20      break;
21    case "betaDesign":
22      sessionStorage.setItem("Value", "./assets/css/Cheat4.css");
23      break;
24    case "normalText":
25      sessionStorage.setItem("Typewriter", true);
26      break;
27    default:
28      sessionStorage.setItem("Value", "./assets/css/main.css");
29  }
30 }
31

```

```

32 // Updates the HTML pages with the new Changes each time the page is opened
33 // Will be used in the body tag as an onLoad method
34 function updatePages() {
35   // try-catch implemented to prevent unnecessary errors from showing up
36   try {
37     // Gets the ID of the Element being updated
38     let ID = sessionStorage.getItem("ID");
39
40     // Gets the attribute which will be changed
41     let attribute = sessionStorage.getItem("Attribute");
42
43     // Gets the value that will be replaced for the changed Attribute
44     let value = sessionStorage.getItem("Value");
45
46     // Carries out the change
47     document.getElementById(ID).setAttribute(attribute, value);
48   }
49   catch {}
50 }

```

Figures 11 & 12: The code used to create the Cheat Code System

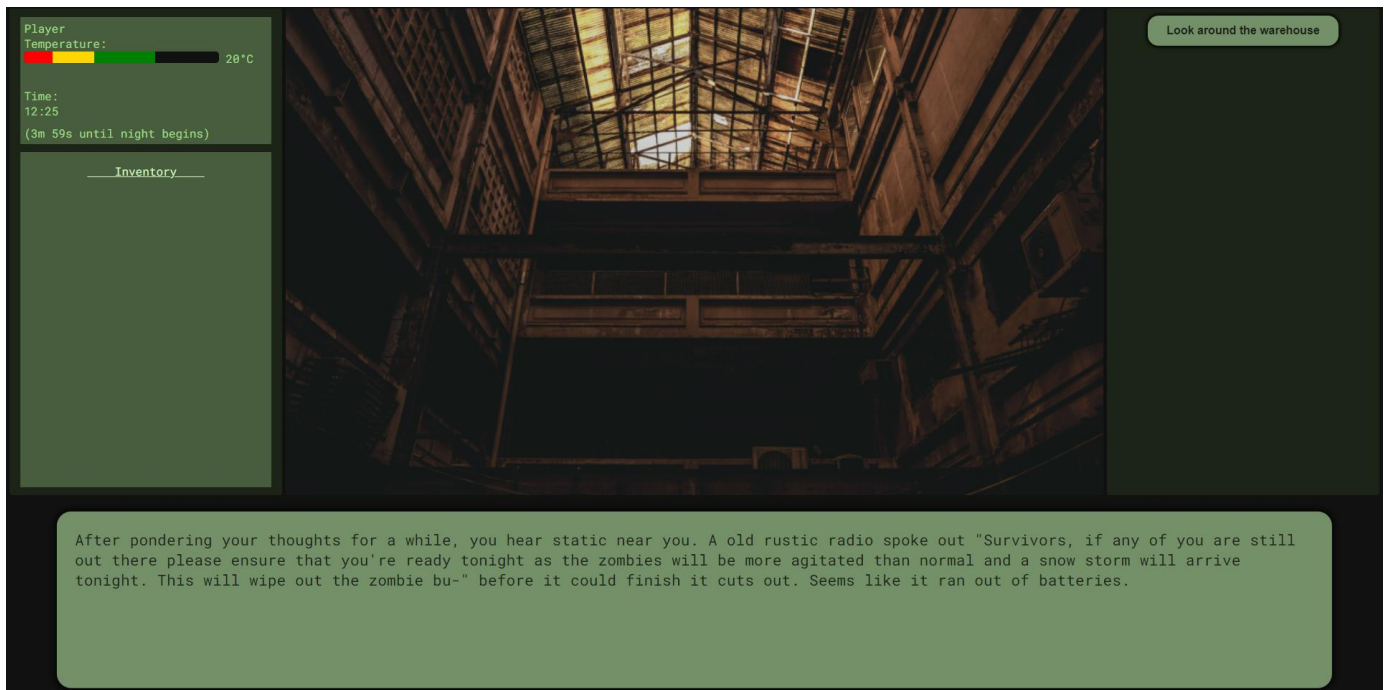

Figure 13: Example of the Cheat Code System when the code "GreenScheme" is used

Similarly, I decided to add some colour schemes in order to aid those who are colourblind. So, when the player loads up the game, they have the option in the form of radio buttons to change the colour scheme to a vibrant blue and orange colour scheme, a vibrant pink and yellow colour scheme or have the colour scheme be the main colour scheme (in case the player accidentally clicks on one of them/changes their mind)

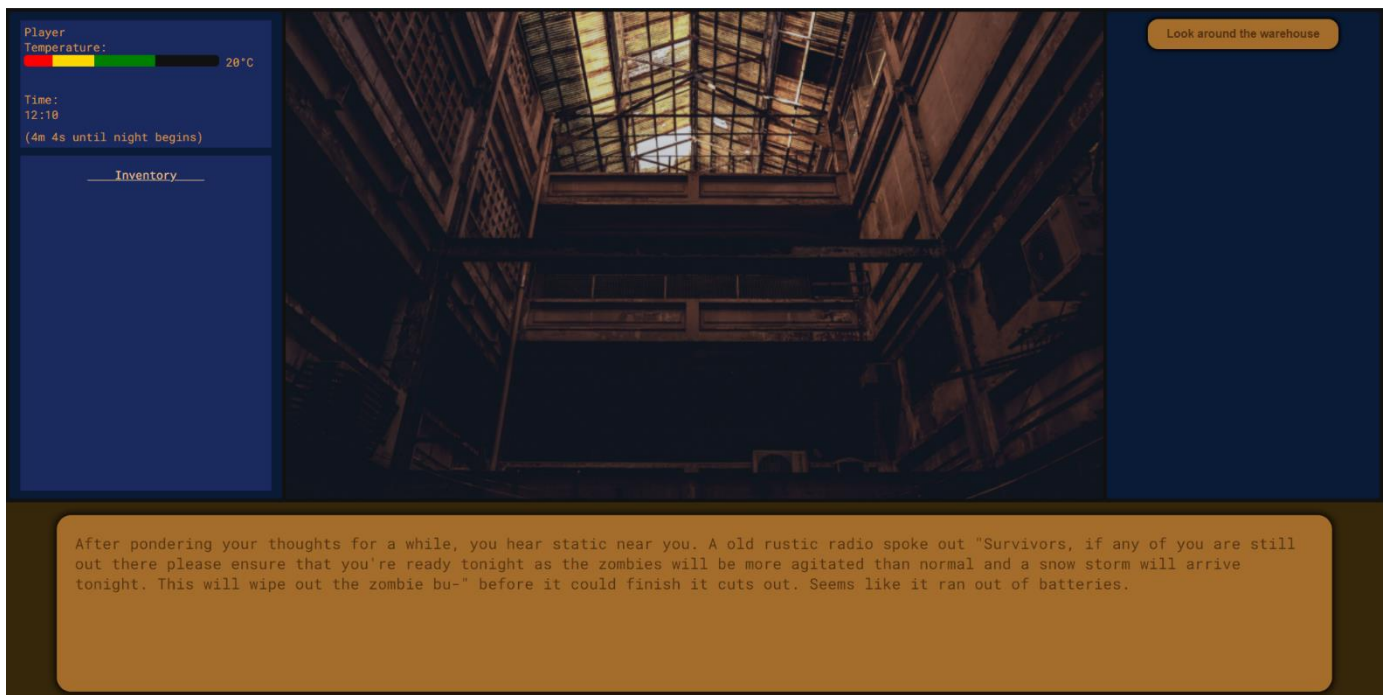

Figure 14: Example of one of the two Colourblind friendly colour schemes

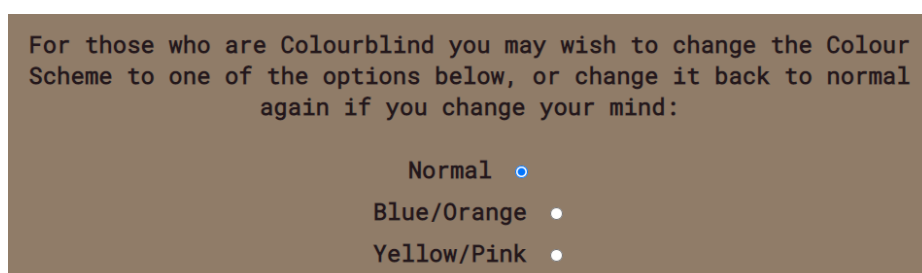

Figure 15: Player given the option to change the colour scheme to a colourblind friendly one

```

1 // validates the selected colour scheme
2 function validateOption() {
3
4     // Stores a list of the radio buttons
5     var optionList = document.getElementsByName('Scheme');
6     // Loops through the list of radio buttons to check to see if one's checked.
7     for (var i = 0; i < optionList.length; i++) {
8         if (optionList[i].checked) {
9             var option = optionList[i].value;
10        }
11    }
12
13    sessionStorage.setItem("ID", "Styling");
14    sessionStorage.setItem("Attribute", "href");
15
16    // switches the effects based on the selected radio button's value
17    switch(option){
18        case "Blue":
19            sessionStorage.setItem("Value", "./assets/css/ColourblindColourPalette.css"); break;
20        case "Yellow":
21            sessionStorage.setItem("Value", "./assets/css/ColourblindColourPalette2.css"); break;
22    }
23 }

```

Lastly, although not major, I did make some changes to the Warehouse location after its initial structure and Text Nodes had been added, such as adding images, sounds and some endings to allow the player to stay and prepare for the night there as well as the other locations.

```

1 {
2     id: 5.1,
3     text: "You decided to wait patiently for the night to fall over the abandoned Warehouse. However, as the hours went by you could start to hear the shrieks of the" +
4         "Zombies from outside get louder and louder as they slowly approached the Warehouse. Unfortunately, because you weren't able to fix the fence and because you didn't" +
5         "barricade the front door to the Warehouse, there was little opposition for the zombies that were able to get through the gap in the fence and so as they broke down" +
6         "the door to your Bunker, you were completely overwhelmed and with no escape route, you accepted your fate..." +
7         "<b><em>You Died!</em></b></br></br><a href='\"EndStatistics.html\"'>See Statistics</a>",
8     inventory: '',
9     image: 'assets/images/You-Died_TEST-GIF.gif',
10    options: []
11 },
12 {
13     id: 5.2,
14     text: "You decided to wait patiently for the night to fall over the abandoned Warehouse, and as you did, the faint piercing screeches of the Zombies in the distance" +
15         "got louder and louder as they approached the Warehouse. Thankfully because you fixed the fence the Zombies had a hard time getting over. However, the Zombies" +
16         "started to pile on top of each other to enable a small amount of Zombies to get over the fence, and because you didn't barricade the front door the small amount" +
17         "of Zombies eventually found their way down to your Bunker and broke down the door. You were able to defend yourself for a short time, but your efforts were in vain" +
18         ". The zombies had you..." +
19         "<b><em>You Died!</em></b></br></br><a href='\"EndStatistics.html\"'>See Statistics</a>",
20     inventory: '',
21     image: 'assets/images/You-Died_TEST-GIF.gif',
22     options: []
23 },
24 {
25     id: 5.3,
26     text: "You decided to wait patiently for the night to cover the Warehouse in darkness, and as you did you could hear the blood curdling screams of not only the Zombies" +
27         "but of some other people as they were attacked. However, as the Zombies grew closer and closer you felt confident in the fact that you were able to successfully" +
28         "barricade the front door to the Warehouse because the wood was sturdy and strong, and thankfully there were no other entrances into the Warehouse. As the Zombies" +
29         "approached, although it wasn't fixed, the fence managed to still pose as an obstacle to the Zombies as only some of them were able to get through the gap completely" +
30         "unharmd, but your defences on the door were able to hold off the few that did make it through..." +
31         "<b><em>You Survived!</em></b></br></br><a href='\"EndStatistics.html\"'>See Statistics</a>",
32     inventory: '',
33     image: 'assets/images/Victory2_TEST-GIF.gif',
34     options: []
35 },
36 {
37     id: 5.4,
38     text: "After having fixed the fence outside the Warehouse and barricaded the front door to the Warehouse, you were confident in the fact that these defences should hold off" +
39         "the oncoming Zombies. As the hours passed by, you could hear the shrill shrieks of the Zombies as they arrived at the Warehouse, but because you fixed the fence the Zombies" +
40         "weren't able to get passed it as easily. However, they did start to pile on top of each other to allow a few Zombies to get over the fence, but their efforts were in vain as" +
41         "the strength of the few Zombies that did get over wasn't enough to break down the barricaded door to the Warehouse..." +
42         "<b><em>You Survived!</em></b></br></br><a href='\"EndStatistics.html\"'>See Statistics</a>",
43     inventory: '',
44     image: 'assets/images/Victory2_TEST-GIF.gif',
45     options: []
46 },

```

Figure 17: Code showing the endings I added to the Warehouse location
